SunRx | **Command340B**™

Bold solutions built for a rapidly changing market.

Across the 340B landscape, covered entities are navigating an increasingly complex terrain. Manufacturers are tightening access and demanding direct submissions through Beacon, the current platform of choice for 340B rebate aggregation. At the same time, mounting audit scrutiny and evolving transparency laws are putting new pressure on operations, compliance, and reporting.

Command340B is SunRx's response to today's and tomorrow's 340B challenges — an integrated suite that gives covered entities the infrastructure, tools, and agility to stay compliant, streamline operations, and manage rebate-driven program complexity. Built to scale with program needs, Command340B supports each phase of the 340B lifecycle — from real-time data integration to Beacon submissions, audit readiness, and rebate strategy.

Take Command of 340B with SunRx

Each of the Command340B solutions addresses a major market challenge. Together, they provide the infrastructure needed to protect savings, reduce risk, and deliver stronger 340B outcomes.

Assist340B™
ESP & Rebate Data Submission

Assist340B is the foundation of the Command340B suite and powers the entire solution. It's a real-time platform that integrates multiple sources of data to support eligibility verification, uploads to 340B ESP™ and Truzo for manufacturer-restricted reporting, and automated Beacon rebate submissions.

By aggregating data and automating claim submission, Assist340B streamlines financial management and rebate tracking — helping covered entities stay responsive and in control without draining resources.

Edge340B™
Rebate Model TPA

Built for the evolving 340B market, Edge340B is a modern platform designed specifically for rebate-based programs. It integrates with Assist340B to receive Beacon submissions, reorganize claim-level rebate data, and deliver the visibility and oversight covered entities need. Edge340B provides the infrastructure to process, monitor, and manage rebate participation while also supporting traditional 340B requirements.

ACC340B™
Advanced Claims Capture

In today's 340B environment, covered entities can't afford to leave 340B prescriptions uncaptured — yet traditional referral capture methods often miss significant opportunities. ACC340B changes that. As the industry's most advanced automated claims capture solution, it identifies overlooked prescriptions, boosts savings by up to 50%, and maintains strict HRSA-aligned compliance. With fast implementation and no fees unless additional savings are found, ACC340B helps entities recover missed savings.

SunRx | **Command340B**™

Assist340B™

ESP & Rebate Data Submission

The future of 340B starts here.

As 340B programs face mounting complexity — from Beacon requirements and shrinking manufacturer access to shifting rebate models — Assist340B delivers the data infrastructure covered entities need to stay compliant, responsive, and financially on track.

The foundation of Command340B — SunRx's integrated solution suite — Assist340B serves as the real-time data engine that powers the entire Command340B platform.

It integrates multiple data sources to support critical processes like eligibility verification, automated Beacon rebate submissions, and direct uploads to 340B ESP™ and Truzo for manufacturer reporting. This allows covered entities to support rebate participation without adding workload or complexity.

Assist340B also builds analytically driven metrics to identify opportunities to correct inaccuracies or gaps in denied rebate attempts — enabling resubmission and potential credit. Aggregated data is used for invoicing and can be shared with other 340B TPAs.

SunRx | **Command340B**™

Edge340B™

Rebate Model TPA

Next-generation platform.

As 340B continues to evolve, traditional TPAs are being pushed beyond their limits. Most legacy systems weren't built to support Beacon submissions, interpret rebate data, or manage the demands of a credit-rebate model — rendering many ineffective and unable to support evolving program needs.

Edge340B is a modern platform specifically built for rebate-based 340B. It integrates with Assist340B to receive and process Beacon submissions, including returned binary files. Edge340B reorganizes and reformats claim-level rebate data to create a comprehensive view across an entity's various 340B programs — laying the groundwork for deeper analytics and better rebate management.

With Edge340B, organizations can monitor performance, identify issues, and evaluate financial impact from a single interface. It supports dual workflows for entities managing both traditional and rebate-based participation — helping providers maintain continuity as 340B models evolve.

Edge340B gives covered entities the visibility, flexibility, and infrastructure needed to manage the operational demands of today's rebate-driven environment.

ACC340B™

Rebate Model TPA

Increase capture. Improve savings and patient care.

As covered entities seek new ways to boost savings in a shifting 340B environment, missed referral opportunities and lost claims remain a significant source of untapped value.

SunRx's Advanced Claims Capture (ACC340B) is designed to close that gap — helping entities recover compliant savings while keeping compliance, speed, and simplicity at the forefront.

The solution takes referral capture a step further by identifying and appropriately resolving at-risk or lost eligible claims. It also improves referral workflows through customized recommendations to your policies and procedures, which may eliminate the need for extra operational resources — helping maximize savings while maintaining compliance.

ACC340B includes a no-cost compliance check up and ongoing compliance support to help keep programs aligned with regulatory standards while reducing internal resource demands. The ACC340B platform and processes are SOC 2 certified with patient and switch data housed in a secure environment that meets rigorous privacy and processing standards.

Implementation is quick and simple. There's no need for EHR access or cumbersome, costly, resource-intensive integrations. Clients typically begin seeing results within a week or two — not months — enabling faster savings and more complete control over 340B performance.

FAQs

Bold Solutions Built for a Rapidly Changing Market

? What is the Command340B suite?

A Command340B is SunRx's response to today and tomorrow's 340B challenges — an integrated suite that gives covered entities the infrastructure, tools, and agility to stay compliant, streamline operations, and manage rebate-driven program complexity. Built to scale with program needs, Command340B supports each phase of the current 340B lifecycle, including real-time data integration to Beacon (and any future rebate platforms), submissions, savings transparency, and rebate model strategy.

Each Command340B solution targets a major market challenge. Together, the programs work seamlessly to increase savings, reduce risk, and deliver stronger 340B outcomes:

Assist340B: ESP & Rebate Data Submission
The engine that powers real-time data integration, Beacon and ESP submissions, eligibility validation, and rebate tracking.

Edge340B: Rebate Model TPA
A next-generation platform built specifically to support rebate-based 340B programs while maintaining any legacy 340B program needs.

Certify340B: Compliance & Audit
A single, automated platform to compile, organize, and validate required audit data, including HRSA, manufacturer, self, and third-party audits.

Clear340B: Transparency Reporting
The clarity, transparency, and full 340B visibility covered entities need to track savings, utilization, and program impact for state and federal purposes.

? Who is Command340B designed to support?

A Command340B supports covered entities such as hospitals, health systems, grantees, along with TPAs, and pharmacies that need to manage rebate-based models, compliance, and audit readiness.

? Why did SunRx develop Command340B?

A Across the 340B landscape, covered entities face increasing complexity, tighter manufacturer access requiring direct Beacon submissions, and mounting audit scrutiny alongside evolving transparency laws. Command340B helps covered entities stay ahead of these changes and provides the infrastructure needed to protect savings, reduce risk, and deliver stronger program outcomes.

? What market challenges does the Command340B suite address?

A Command340B helps covered entities navigate the most pressing challenges in 340B, including:

- Shrinking manufacturer access and tighter restrictions
- Complex Beacon submission requirements
- Increased audit scrutiny and documentation pressure
- Growing federal and state transparency mandates

? How does Command340B help reduce administrative burden?

A By automating data aggregation, claim validation, audit preparation, and reporting, Command340B reduces manual effort, minimizes errors, and frees you to focus on patient care and strategic program management.

SunRx | Command340B™

FAQs
Command340B™

? What makes Command340B different from other 340B vendors or solutions?

A Command340B was built specifically for today's rebate-first environment. It includes real-time Beacon and ESP integration, claim validation, and automated audit and reporting — all supported by a unified data infrastructure that works across the suite.

Unlike traditional systems, it delivers an integrated, scalable platform with real-time data integration, audit readiness support, and transparency reporting — all built with a strong focus on compliance. By combining advanced analytics, analytical driven metrics, and seamless workflows, Command340B empowers covered entities to protect savings, reduce risk, and optimize program outcomes.

? What results can covered entities expect from implementing Command340B?

A
- Faster and more accurate Beacon submissions
- Reduced risk of missed rebates or non-compliance
- Increased operational efficiency with less manual work
- Better visibility into savings, audit preparedness, and program performance

? Can we use the solutions individually, or do we need the full suite?

A Each Command340B solution can be implemented individually — but Assist340B is required as the foundation. It powers real-time data integration and submission across Beacon and ESP, and enables the functionality of the other solutions. Edge340B, Certify340B, and Clear340B can be added to support rebate processing, strengthen audit defensibility, and meet transparency mandates through standardized savings reporting.

? How does Command340B integrate with my systems — including Beacon and 340B ESP?

A Command340B connects with your EHR, pharmacy, wholesaler, and TPA systems to collect and align eligibility, claim, and rebate data. Assist340B automatically submits to Beacon and ESP, ensuring accurate and timely processing. Edge340B processes returned binary rebate files, while Certify340B and Clear340B leverage that data for audit readiness and transparency reporting.

? How does Command340B support a rebate-driven market?

A Command340B supports each phase of the rebate model: It helps capture and validate eligibility data, automate submission to Beacon, manage returned rebate files, provide ongoing compliance support, and standardize reporting.

? Is Command340B scalable to evolving 340B program needs?

A Yes. Command340B is modular, flexible, and built to scale to support changing rebate models, program growth, and increasing transparency and audit demands.

? What does onboarding look like for Command340B, and how long does it take to implement?

A SunRx provides implementation support and technical guidance to streamline onboarding. Assist340B is typically deployed first to integrate core data systems, with other modules added based on your priorities.

SunRx | Command340B™

Assist340B™

? What is Assist340B?

A Assist340B is the real-time data engine that powers rebate success for covered entities. It's the foundation of SunRx's integrated Command340B suite and provides key processes like Beacon rebate processing, ESP submissions, and eligibility verification.

? Why is Assist340B the foundation of the suite?

A Assist340B powers the Command340B platform. It connects to your data sources, validates claims, supports ESP and Beacon submissions, tracks rebate outcomes, and includes a feature to mitigate reimbursement delays.

? Why is Assist340B critical in today's 340B landscape?

A As 340B programs face increasing complexity — including Beacon requirements, shrinking manufacturer access, and shifting rebate models — Assist340B provides the technical foundation and real-time automation needed to stay compliant, responsive, and financially on track.

? What data sources does Assist340B integrate?

A Assist340B integrates multiple data sources to streamline claim submission and manage the full lifecycle of 340B rebates. It reduces workload by supporting real-time submissions and automating processes like eligibility checks and claim tracking.

? How does Assist340B support financial flexibility?

A Assist340B offers integrated support and financial tracking — bridging the gap between high-cost drug spend and delayed manufacturer reimbursements.

? Can Assist340B help recover missed rebates?

A Yes. It uses analytical driven metrics to identify lost rebate opportunities and enables resubmission for potential credit, helping maximize rebate recovery.

SunRx | **Command340B™**

Edge340B™

? What is Edge340B?

A Edge340B is a next-generation platform built specifically to support rebate-based 340B programs.

? How does Edge340B differ from traditional TPAs?

A Edge340B is built for rebates — it reorganizes Beacon data into claim-level metrics, supports dual workflows (rebate and traditional 340B discount), and integrates with Assist340B to provide a full rebate infrastructure. Traditional TPAs may lack this level of integration or Beacon readiness.

? Why was Edge340B developed?

A As the industry shifts, traditional TPAs are being pushed beyond their limits. Most legacy systems weren't built to support Beacon submissions, interpret rebate data, or manage the demands of a credit-rebate model — rendering many ineffective and unable to support evolving program needs.

? How does Edge340B work with Beacon submissions?

A Edge340B integrates with Assist340B to receive and process Beacon submissions, including returned binary files.

? What kind of data processing does Edge340B perform?

A It reorganizes and reformats claim-level rebate data to deliver a complete picture across a covered entity's 340B program — enabling deeper analytics and more effective rebate oversight.

? How does Edge340B support program visibility and oversight?

A It provides a centralized interface to monitor performance, flag issues, and assess financial impact.

? Can Edge340B support both traditional and rebate-based models?

A Yes. It supports dual workflows for entities managing both traditional and rebate-based participation — helping providers maintain continuity as 340B models evolve.

? What advantage does Edge340B offer covered entities?

A Edge340B gives covered entities the visibility, flexibility, and infrastructure needed to manage the operational demands of today's rebate environment.

SunRx | Command340B™

ACC340B™

? What is Advanced Claims Capture 340B (ACC340B)?

A ACC340B is our industry-leading automated system that optimizes referral and claim capture, unlocking additional savings while maintaining compliance. It increases savings by revealing opportunities often missed through traditional methods.

? What is the expected savings increase with ACC340B?

A Our solutions deliver up to a 50% increase in savings with ACC340B and 35%+ additional savings beyond traditional referral methods.

? How is ACC340B different from traditional referral capture programs?

A With traditional programs, identifying missed opportunities can be an overly complex or manual process, often resulting in lost savings. Our automated ACC340B solution streamlines the processes while extending eligibility to outside providers using an approach that has passed HRSA audits.

? What differentiates ACC340B in the industry?

A **Automation and Transparency**
As the industry's leading automated solution created by 340B compliance experts, the ACC340B process yields significant results by aligning proprietary policy and procedure language (P&Ps) with a robust and one-of-a-kind claims application.

Speedy Implementation
There is no need for resource intensive and unnecessary complex integrations. Clients can begin seeing new savings within a few weeks of signing an agreement.

Performance-based Savings
There is no fee unless we are able to identify and capture additional prescriptions! In fact, in some cases, ACC340B can nearly double capture rates and revenue.

? How is ACC340B committed to compliance?

A ACC340B is designed with compliance in the forefront. We support multiple clients in HRSA audits every year, engaging directly with Bizzell auditors and gaining valuable insight that allows us to have the most relevant, up-to-date information regarding the 340B program.

? What if we're hesitant to expand our definitions and program language to gain greater savings?

A We worked directly with Apexus to craft compliant program language, which has been successfully audited by Bizzell. Compliance and increased savings directly correlates to the language in your P&Ps. We can provide language for multiple sections of your P&Ps to support compliance.

SunRx | **Command340B**™

FAQs

ACC340B™

? Can ACC340B bring additional claims and savings if we already have a process to review referral claims written by outside/specialty providers?

A Even if you have processes and resources in place to capture referral prescriptions today, ACC340B can help you qualify for additional claims and increase savings — and we can even work alongside your current vendor.

? How long does it take to get up and running to see additional savings?

A After signed agreements, we begin processing claims for most clients within a week or two — not months like other vendors.

? What if we don't have the resources to go through a lengthy integration or do not want to provide EHR data?

A ACC340B makes it easy for clients! We work directly with your TPA to receive all necessary data.

? Do you own the ACC340B application or outsource services?

A SunRx built and owns the ACC340B application, which is SOC-2 certified. Unfortunately, many vendors — often unbeknownst to the entity — outsource services behind the scenes, including accessing your data and processing sensitive claims and PHI. We own and operate the application and do all the work!
